PRAMANEX

BEACON + RIS

FINAL PRODUCT ARCHITECTURE AND MOAT BLUEPRINT

Target category: Regulatory ChangeOps & Decision Integrity OS

Integrated roadmap combining the existing BEACON core, RIS, competitor-derived capability benchmarks, new moat features, ChangeOps, enterprise integration, and #1-readiness requirements.

Version 1.0 | 26 September 2026

Status boundary: This is a target product and architecture specification. Existing canonical BEACON/RIS elements are distinguished from proposed additions. It is not proof that all listed capabilities are already built, validated, regulator-accepted, or production deployed. “World-first” remains a hypothesis until broader prior-art and market verification is completed.

1. Executive Decision

Question	Final answer
What should BEACON + RIS become?	A Regulatory ChangeOps & Decision Integrity OS: detect regulatory change, research it, map enterprise impact, govern exact-version decisions, execute actions, verify closure, and automatically re-evaluate downstream state when regulatory truth changes.
What should remain the core moat?	Immutable evidence lineage + Digital Twin/dependency graph + regulatory regression testing + revision-bound human decisions + automatic invalidation + historical replay + evidence-verified closure.
Should BEACON replace Veeva/RIM/QMS/eCTD systems?	No. Integrate with them. BEACON should become the intelligence, change-control, decision-integrity and verification layer above/between systems of record and execution.
Do we need more generic AI features?	No. Generic chat, RAG, multi-agent orchestration, dashboards, alerts and citations are already common. Add only features that deepen regulatory control, evidence, dependency, execution or verification.
Can #1 be achieved by features alone?	No. Feature architecture must be matched by global data/source coverage, validated accuracy, enterprise reliability/security, integrations, fast UX, measurable outcomes, domain validation and pilot adoption.
Can “world-first” be claimed now?	Not yet. The reviewed seven competitors do not publicly document the complete target architecture as one product, but that does not prove no other product has it.

Primary product promise: Know what changed; determine exactly what it affects; prove why a decision was made; execute the response; prove closure; and automatically re-evaluate dependent decisions when regulatory truth changes.

2. Competitive Benchmark Used to Shape the Final Architecture

Competitor	Publicly documented strengths used as benchmark	BEACON response
Zelthy	Regulatory monitoring, portfolio impact, submission pipeline, dossier/eCTD, labeling, variation/change management, agentic workflows, integrations, GRC and continuous monitoring.	Do not copy its breadth. Match integration/workflow maturity while differentiating on evidence lineage, decision dependencies, regression, invalidation and closure proof.
Rhizome AI	Deep regulatory research with primary-source/page-level citations and very large evidence searches (public pages advertise up to 1,000 citations per answer).	Upgrade RIS deep-research depth, evidence coverage maps, primary-source prioritization and visible research provenance.
Clarivate Cortellis	Expert-curated global RI, daily updates, large regulatory document corpus, global comparison, CMC intelligence and alerts.	Build scalable source/authority connector mesh and intelligence coverage; do not try to duplicate decades of curated content immediately.
IQVIA Regulatory Intelligence	Real-time regulatory updates, requirements comparison across 110+ countries/regions/organizations, pathway support and alerts.	Strengthen global authority coverage, requirement normalization and cross-market comparison.
Veeva RIM	Authoritative RIM, registrations, submissions, author/review/approve, publishing, archive, correspondence and commitments.	Integrate deeply rather than rebuild. BEACON owns change-to-decision integrity and verified closure; Veeva remains system of record/execution where appropriate.
IntuitionLabs	Custom AI for eCTD validation, RIM augmentation, CMC documentation, regulatory publishing, APQR/PQR and inspection readiness.	Add targeted eCTD technical preflight and CMC change-to-dossier mapping, not a full authoring/publishing replacement.
Agilisium Context AI	Pharma knowledge graphs, RAG, compliance guardrails, multi-agent orchestration, HITL, audit logging and enterprise connectors.	Make agent architecture regulatory-state-aware: typed bounded agents, exact-version dependencies, regression tests, human gates and historical replay.

3. Existing BEACON + RIS Baseline: Keep, Strengthen, Do Not Remove

ID	Existing capability	Decision	Final role
F01	Official Source Registry	KEEP	Trusted source universe, authority, jurisdiction, permission, cadence and ownership.
F02	Scheduled Source Monitoring	KEEP + HARDEN	Idempotent monitoring with source-health states and bounded retries.
F03	Snapshot and Version Lineage	KEEP - MOAT	Original bytes, hash, metadata, predecessor and immutable history.
F03A	Conditional Multilingual Branch	KEEP	Translation remains working aid; original-language source stays authoritative.
F04	Exact + Semantic Change Detection	KEEP - MOAT	Exact diff is evidence; semantic interpretation is a bounded candidate.
F05	Deduplication + Event Consolidation	KEEP	One material event with complete source lineage.
F06	Regulatory Status Classification	KEEP	Draft/final/effective/unknown status remains source-supported.
F07	Requirement / Obligation Extraction	KEEP + EXPAND	Atomic obligations with exact source spans; unsupported extraction blocks completion.
F08	Jurisdiction + Lifecycle Tagging	KEEP	Publication/effective/retrieval/supersession and market context.
F09	Versioned Customer Applicability Profile	KEEP + EVOLVE	Becomes input to Enterprise Regulatory Digital Twin.
F10	Product / Process / Document Impact Map	KEEP + EVOLVE	Becomes multi-hop dependency and blast-radius engine.
F11	Priority + Confidence + Evidence Sufficiency	KEEP	Never collapse urgency, confidence and evidence sufficiency into one score.
F12	Evidence-Linked Human Decision Record	KEEP - MOAT	Upgrade to Decision Contract bound to exact evidence/profile/rule/model revision.
F13	Alerts + Digests	KEEP	Source-safe, deduplicated operational notifications and intelligence digests.
F14	Owner + Action + Closure	KEEP + EXPAND	Controlled remediation, escalation and closure proof.
F15	Dashboard + Audit Export	KEEP + EXPAND	Audit reconstruction, replay, evidence manifests and controlled exports.
B-RI01	Related Evidence Retrieval	KEEP + SCALE	Deep approved/versioned evidence search with exact spans and provenance.
B-RI02	Historical + Cross-Market Intelligence	KEEP + SCALE	Authority/market comparison without false equivalence.
B-RI03	Evidence-Linked Intelligence Brief	KEEP	Every material statement grounded or explicitly unresolved.
B-RI04	Unknowns / Contradictions / Open Questions	KEEP - MOAT	Unknown/conflict/stale/missing evidence becomes a workflow state, not hidden uncertainty.
B-P01	Impact Explanation + Exclusion Record	KEEP - MOAT	Explain why objects are affected and why others are excluded.
B-P02	Historical Decision Replay	KEEP - MAJOR MOAT	Reconstruct source/profile/RIS/impact/decision as they existed at original decision time.
B-P03	Approval Invalidation on Material Change	KEEP - MAJOR MOAT	Preserve history while re-opening decisions whose dependencies materially changed.
B-P04	Source-Health + Evidence-Gap Workbench	KEEP - MAJOR MOAT	One operational view of broken retrieval, freshness,

ID	Existing capability	Decision	Final role
			contradictions and unanswered questions.
B-P05	Closure Evidence Comparison	KEEP - MAJOR MOAT	Before/after proof plus named reviewer verification; “Done” is not closure.

4. Final Integrated Feature Stack

#	Domain	Feature	Action	Layer(s)	Final behavior
01	Trusted Source Control	Official Regulatory Source Registry	KEEP	L03/L06	Approved source, authority, purpose, jurisdiction, cadence, owner and permission.
02	Monitoring	Scheduled Regulatory Monitoring	KEEP + HARDEN	L03/L08/L12	Idempotent scheduled/webhook/manual checks with bounded retry.
03	Monitoring	Source Health Intelligence	EXPAND	L03/L11/L12	Freshness, reachability, parser health, permission health, structure drift and failure reason.
04	Evidence	Immutable Snapshot + Version Lineage	KEEP - MOAT	L04	Original bytes, hashes, metadata, headers, version lineage and predecessor.
05	Detection	Exact Regulatory Diff	KEEP - MOAT	L04/L05/L07	Exact added/removed/modified source spans before AI interpretation.
06	Detection	Semantic Change Intelligence	KEEP + IMPROVE	L05/L07/L09	Bounded interpretation linked to exact diff evidence.
07	Requirements	Atomic Obligation Compiler	ADD	L05/L07	Break material regulatory text into machine-addressable obligations.
08	Requirements	Jurisdiction + Lifecycle Intelligence	KEEP	L06/L07	Publication/effective/supersession dates, lifecycle state and market scope.
09	RIS	Deep RIS Research Mode	ADD / MAJOR UPGRADE	L07/L09	Large primary-source research, exact citations, visible search coverage and provenance.
10	RIS	Regulatory Knowledge Graph	ADD	L07	Authority, requirement, precedent, topic, market and company relationships.
11	RIS	Historical + Cross-Market Intelligence	KEEP + IMPROVE	L07/L09	Previous/current position and relevant market comparison without forced equivalence.
12	RIS	Unknown / Contradiction Engine	KEEP - MOAT	L07/L10/L11	Explicit missing, stale, conflicting and unanswered evidence states.
13	Enterprise Context	Enterprise Regulatory Digital Twin	ADD - CORE MOAT	L06/L07	Versioned product, market, site, process, dossier, SOP, label, commitment and registration state.
14	Impact	Portfolio Blast-Radius Engine	ADD - CORE MOAT	L07/L08/L09	Traverse dependencies to identify potentially affected enterprise objects.
15	Impact	Multi-Hop Impact Propagation	ADD	L07/L08	Requirement -> product -> site -> process -> document -> submission -> market.
16	Impact	Proof-of-Non-Impact	EXPAND - MOAT	L07/L10	Evidence-backed rationale for unaffected/excluded objects.
17	Simulation	Regulatory Scenario Simulator	ADD	L07/L08/L09	Test draft/future requirements against a sandboxed enterprise state.

#	Domain	Feature	Action	Layer(s)	Final behavior
18	Simulation	Cross-Market What-If Comparator	ADD	L07/L09	Simulate different jurisdictional consequences without changing production truth.
19	ChangeOps	Regulatory Policy-as-Code	ADD - CORE MOAT	L06/L08/L10	Represent approved interpretations as version-controlled executable controls where feasible.
20	ChangeOps	Regulatory Unit Tests	ADD - CORE MOAT	L08/L11	Machine-test company state against approved atomic obligations.
21	ChangeOps	Regulatory Regression Suite	ADD - CORE MOAT	L08/L11	Re-run relevant tests whenever evidence, policy, profile, workflow or model revisions change.
22	ChangeOps	Compliance Test Coverage	ADD	L11	Show obligations with executable checks, manual checks or no controls.
23	Decision	Evidence Sufficiency Engine	ADD	L07/L10/L11	Assess completeness, authority, freshness, contradiction and traceability separately.
24	Decision	Decision Contract	EXPAND - CORE MOAT	L04/L10/L11	Bind evidence version, profile version, policy/rule version, model/workflow revision and reviewer.
25	Decision	Decision Dependency Graph	ADD - CORE MOAT	L07/L10	Every decision exposes upstream facts and artifacts it depends on.
26	Decision	Automatic Staleness Propagation	ADD - CORE MOAT	L07/L08/L10	Upstream material change marks dependent intelligence, impact, decisions and actions stale.
27	Decision	Approval Invalidation Engine 2.0	EXPAND - CORE MOAT	L08/L10	Re-open only approvals whose dependencies materially changed; preserve old approval as history.
28	Decision	Decision Debt Register	ADD	L08/L11	Track stale, unresolved, evidence-deficient or overdue regulatory decisions.
29	Decision	Regulatory Drift Detection	ADD	L07/L11	Detect divergence between current regulatory requirements and approved company state.
30	Execution	Action Orchestration	KEEP + IMPROVE	L08/L12	Owner, action, due date, escalation, acknowledgement and controlled state.
31	Integration	RIM/QMS/Submission Handoff	ADD - CRITICAL	L12	Push approved tasks/context to systems of record; avoid rebuilding mature platforms.
32	Submission	Submission Readiness Graph	ADD	L07/L12	Map change/requirements to dossier sections, missing evidence and readiness.
33	Submission	eCTD Technical Preflight	ADD - TARGETED	L05/L11/L12	Optional XML/PDF/link/lifecycle/sequence checks before downstream publishing.
34	CMC	CMC Change-to-Dossier Mapper	ADD	L07/L12	Map regulatory/quality changes to potentially affected CTD Module 3 sections.
35	Lifecycle	Labeling + Variation Propagation	ADD	L07/L08/L12	Candidate local label/variation impacts with jurisdiction-specific evidence.
36	HA Interactions	Health Authority Correspondence + Commitment Intelligence	ADD	L04/L07/L12	Connect queries/commitments to product, submission, evidence and actions.
37	Closure	Closure Proof Engine	EXPAND - CORE MOAT	L04/L07/L08/L10	Compare expected remediation with actual before/after evidence.

#	Domain	Feature	Action	Layer(s)	Final behavior
38	Closure	Persistent Closure Monitor	ADD - CORE MOAT	L07/L08/L11	Detect later evidence changes that can make a previously verified closure stale.
39	Replay	Historical Decision Replay 2.0	EXPAND - CORE MOAT	L04/L07/L11	Reconstruct exact original source, context, rules, models, decision and action state.
40	Replay	Counterfactual Decision Replay	ADD	L07/L09/L11	Compare “what we knew then” with “what we would conclude now” without rewriting history.
41	Replay	Regulatory Time Machine	ADD	L04/L07/L11	Navigate regulatory and company state at a selected historical date.
42	Assurance	Trust / Assurance Test Harness	ADD	L11	Continuous testing of retrieval, citations, groundedness, parsers, agents, policies and access boundaries.
43	Operations	Operational Observability + SLOs	ADD	L11/L12	End-to-end run tracing, source freshness, detection latency, evidence completeness, decision and closure SLAs.

5. Final L01-L12 Architecture

Layer	Final name	Expanded responsibility	Key moat contribution
L01	Workspace & Tenant Isolation	Organization/workspace isolation, environments, protected data boundaries, tenant-safe stores and exports.	Trust foundation; negative cross-tenant tests across relational/object/vector/export paths.
L02	Identity, Authority & Decision Rights	RBAC/ABAC, segregation of duties, reviewer authority, service identities and approval rights.	A workspace admin cannot become regulatory approver merely by being admin.
L03	Global Regulatory Source & Connector Mesh	Source registry, adapters, permission/purpose, source health, connector lifecycle and company-system intake.	Reliable, extensible authority coverage.
L04	Immutable Evidence & Provenance Ledger	Original bytes, hashes, versions, timestamps, immutable-style revision history, evidence manifests and closure artifacts.	Historical truth and replay.
L05	Regulatory Parsing & Semantic Compiler	HTML/XML/PDF/table parsing, OCR when justified, coordinates, normalized sections and atomic obligations.	Machine-addressable regulatory truth without losing originals.
L06	Policy, Jurisdiction & Context Governance	Authority, jurisdiction, lifecycle, intended use, approved interpretations and enterprise context.	Prevents false universalization and context leakage.
L07	Regulatory Knowledge, Evidence & Dependency Graph	Change -> requirement -> evidence -> company object -> impact -> decision -> action -> closure plus Digital Twin dependencies.	Primary structural moat.
L08	Regulatory ChangeOps Orchestration	Monitoring, research, impact, simulation, tests, review, action, closure, staleness propagation and replay.	Turns RI into an operational control system.
L09	Bounded Agent & Model Runtime	Typed specialist agents, model routing, explicit scopes, bounded retries/repair and deterministic parent orchestration.	Agentic capability without uncontrolled swarm behavior.
L10	Decision Integrity & Human Authority	Evidence sufficiency, decision contracts, review gates, stale/invalidation logic and final named human authority.	Primary governance moat.
L11	Assurance, Evaluation & Observability	Grounding checks, regression suites, test fixtures, SLOs, audit, feedback, model/workflow provenance and restore/reconstruction tests.	Makes quality measurable and reproducible.

Layer	Final name	Expanded responsibility	Key moat contribution
L12	Integration, Execution & Enterprise Scale	Veeva/RIM/QMS/LIMS/MES/ERP/eCTD/Jira/Teams/API integration, queues, notifications, backups, DR and scaling.	Compete through interoperability rather than replacement.

Architecture rule: Do not create an isolated RIS or "AI layer" that becomes a second source of truth. RIS, Digital Twin, agents, ChangeOps and assurance reuse the same L01-L12 evidence/state architecture.

6. Four Cross-Cutting Control Planes

Plane	Purpose	Mandatory mechanisms	Outcome
P01 Evidence Integrity Plane	Prove where every material fact came from.	Exact source/version/span; authority metadata; freshness; evidence coverage; hash/provenance; immutable revisions.	No unsupported material statement silently enters a decision.
P02 Decision Integrity Plane	Prove exactly why a human decision was made.	Decision Contract; dependency graph; evidence sufficiency; named reviewer; exact revision; invalidation rules.	Every approval is explainable, version-bound and re-evaluable.
P03 Regulatory ChangeOps Plane	Continuously test enterprise regulatory state.	Policy-as-code; unit/regression tests; simulation; change propagation; drift detection; CI gates.	Regulatory change becomes testable operational state, not just an alert.
P04 Closure Assurance Plane	Prove required remediation occurred and remains valid.	Expected-vs-actual evidence; named closure review; persistent closure monitoring; re-open on upstream change.	"Done" is replaced by evidence-verified and continuously defensible closure.

7. Final Bounded Agent Runtime

Agent	Responsibility	Hard boundary
A1 Source Guardian	Authorize/fetch sources, health checks, snapshots and lineage.	No applicability or legal conclusion.
A2 Change Detector	Exact diff, semantic candidate and event consolidation.	Cannot overwrite exact evidence.
A3 Obligation Compiler	Status, atomic obligations, jurisdiction and lifecycle.	Unknown remains unknown; no invented requirement.
A4 RIS Deep Researcher	Approved evidence retrieval, history, cross-market comparison and cited brief.	No final applicability/strategy decision.
A5 Evidence Critic	Challenge citations, coverage, contradictions, staleness and unsupported claims.	Must be independent from the generator it verifies.
A6 Regulatory Graph Agent	Maintain authority/requirement/precedent/evidence relationships.	Cannot approve decisions.
A7 Digital Twin Agent	Load/version enterprise product/site/process/dossier/SOP/label context.	Cannot invent missing company facts.
A8 Blast-Radius Agent	Generate candidate impacted/excluded objects and dependency paths.	Human disposition required for final applicability.
A9 Scenario Agent	Run draft/future what-if simulations in sandbox.	Cannot mutate production regulatory state.
A10 Policy Compiler	Turn approved interpretation into candidate executable controls.	Cannot activate policy itself.
A11 Regression Agent	Run regulatory unit/regression suites after relevant changes.	Cannot waive failed tests.
A12 Decision Integrity Agent	Verify dependencies, evidence sufficiency, revision freshness and decision contract.	Cannot self-approve regulatory decision.
A13 Action Planner	Generate candidate remediation/actions and downstream handoffs.	Cannot declare closure.
A14 Submission Readiness Agent	Map impacts to CTD/eCTD/CMC content and readiness gaps.	No autonomous submission publishing.

Agent	Responsibility	Hard boundary
A15 Closure Verifier	Compare required vs actual remediation evidence.	Cannot self-close without authorized reviewer.
A16 Audit / Reconstruction Agent	Rebuild historical source/RIS/impact/decision/action/closure state.	Read-only history; cannot rewrite evidence.

Runtime contract: Deterministic parent orchestration owns state. Agents receive typed inputs and return typed outputs with evidence references, uncertainty and explicit failure routes. Retrieval, retries and repair are bounded. Every revision triggers re-validation before human review.

8. Regulatory ChangeOps / DevOps Feature Set

ID	Feature	Final behavior
D01	Regulatory CI Pipeline	A trusted regulatory/source/context change automatically starts a controlled pipeline.
D02	Regulatory Unit Tests	Machine-testable obligations execute against versioned enterprise state where feasible.
D03	Regulatory Regression Tests	Previously approved state is re-tested after source/policy/profile/model/workflow changes.
D04	Regulatory Test Coverage	Shows automated, manual and untested obligations.
D05	Regulatory Sandbox / Branch	Draft/future requirements can be modeled without changing approved production state.
D06	Policy Diff	Approved rule changes displayed as exact version differences.
D07	Policy Review / Pull Request	Candidate interpretation enters reviewer-controlled validation and merge flow.
D08	Regulatory Merge Gate	No policy becomes active until evidence, validators and authorized human approval pass.
D09	Shadow Agent / Parser Deployment	New model/parser runs beside current version before replacing it.
D10	Regulatory Canary	Test new rule/model against a controlled portfolio slice before broad activation.
D11	Agent / Prompt / Workflow Versioning	Every machine result records provider, model, prompt, schema and workflow revision.
D12	Controlled Rollback	Restore previous approved configuration after failed deployment without rewriting history.
D13	Source Chaos Tests	Simulate authority outage, malformed PDF, redirect, oversize response and structural drift.
D14	Workflow Chaos Tests	Simulate model, API, connector, queue and downstream RIM/QMS failures.
D15	Change Detection SLO	Measure source-change-to-event latency.
D16	Evidence Freshness SLO	Measure currency of required evidence.
D17	Decision SLA	Measure review age and overdue decisions.
D18	Closure SLA	Measure approved-decision-to-evidence-verified closure.
D19	Evidence Completeness SLO	Measure supported vs unresolved material statements.
D20	End-to-End Regulatory Observability	Trace one run across source, agent, decision, integration, action and closure.

9. Absorb the Best Competitor Capabilities Without Losing Product Focus

Benchmark	Capability worth matching	Where it belongs in BEACON	What NOT to do
Rhizome	Large-scale cited research, primary-source traceability and visible research process.	L07/L09: Deep RIS Research + Evidence Coverage Map.	Do not turn BEACON into only a search/chat product.
Clarivate	Broad curated global RI and CMC coverage.	L03/L07: authority connector mesh + normalized requirement knowledge.	Do not claim equivalent global corpus until actually built/licensed.
IQVIA	Cross-country regulatory requirements and pathway comparison.	L06/L07/L09: cross-market requirement model and comparator.	Do not collapse market differences into a universal answer.
Zelthy	Workflow breadth, impact mapping, dossier/eCTD, labeling, variation and enterprise connectors.	L12 + targeted submission/lifecycle modules.	Do not copy a general-purpose life-sciences platform and dilute BEACON.
Veeva RIM	Registrations, submissions, publishing, archive, correspondence and commitments.	L12 integration + L07 dependency mapping to RIM objects.	Do not rebuild mature RIM/publishing as the core product.
IntuitionLabs	eCTD validation, CMC/document automation and RIM augmentation.	Targeted eCTD preflight + CMC change-to-dossier mapper.	Do not expand into every document-generation workflow.
Agilisium	Knowledge graph, RAG, multi-agent, HITL, audit and enterprise connectors.	L07/L09/L10/L11 with regulatory-state controls.	Do not market generic “RAG + agents + HITL” as the moat.

10. The Actual Moat Stack

Priority	Moat capability	Why it is strategically defensible	Proof required in demo/pilot
1	Regulatory Digital Twin + Dependency Graph	Requires deep, versioned enterprise-context modeling rather than generic RI search.	Show one requirement traversing product/site/process/SOP/dossier/market dependencies.
2	Regulatory Regression Engine	Continuously re-tests approved state when regulatory truth changes.	Change an upstream source and show affected controls/tests re-run.
3	Decision Dependency Graph + Contract	Makes every approval machine-visible, version-specific and traceable.	Open a decision and inspect every upstream evidence/profile/rule/model dependency.
4	Automatic Approval Invalidation	Transforms change monitoring into controlled re-evaluation of existing decisions.	Material source/profile change marks only affected approvals stale and reopens review.
5	Historical Decision Replay	Preserves decision-time truth instead of recomputing history with current evidence.	Reconstruct a six-month-old decision from exact historical versions.
6	Closure Proof + Persistent Closure Monitor	Proves remediation occurred and remains defensible after later changes.	Compare before/after evidence, reviewer verify, then invalidate closure after a relevant upstream change.
7	Regulatory CI/CD + Policy-as-Code	Turns regulatory interpretation into controlled, testable deployment.	Candidate policy -> tests -> reviewer merge -> active version -> rollback.
8	Proof-of-Non-Impact	Makes “not applicable” explainable and auditable, not merely a checkbox.	Show excluded object with matched evidence and exclusion rationale.
9	Scenario Simulator + Counterfactual Replay	Separates future planning/current reinterpretation from historical truth.	Simulate draft rule and compare then-vs-now without changing production state.
10	Failure-Honest State Machine	Prevents outages, missing evidence and exhausted retries from appearing successful.	Demonstrate SOURCE_FAILED, SOURCE_CONFLICT, REQUEST_EVIDENCE and HOLD/EXHAUSTED paths.

11. Necessary Features That Are Not the Moat

Capability	Keep?	Positioning rule
AI regulatory intelligence	Yes	Necessary, but competitors already have it.
Regulatory monitoring and alerts	Yes	Core utility, not unique by itself.
RAG / semantic search	Yes	Implementation primitive, not product moat.
Knowledge graph	Yes	Only differentiated when tied to regulatory dependencies and decisions.
Multi-agent AI	Yes	Only differentiated through bounded scopes, typed contracts and state-aware validation.
Human-in-the-loop	Yes	Enterprise requirement, not unique.
Audit trail	Yes	Expected enterprise capability; replay/dependency reconstruction is stronger.
RBAC / tenant isolation	Yes	Required security baseline.
Cross-market comparison	Yes	Already offered by RI competitors.
Source citations	Yes	Required trust baseline; exact version/span lineage is stronger.
Generic dashboard	Yes	UX surface, not moat.
Workflow automation	Yes	Common; regulatory ChangeOps semantics are the differentiator.

12. What Is Still Required to Compete for a #1 Position

Non-feature requirement	What “good enough” should mean	Evidence before claiming leadership
Execution quality	Critical journey is fast, consistent, understandable and low-friction; no fragile demo-only paths.	Executed user-journey tests and real usability feedback.
Global source/data coverage	Priority authorities and document types are reliably monitored with explicit coverage boundaries.	Published source registry, freshness SLOs and coverage metrics.
Validated accuracy	Detection, extraction, retrieval, impact and citation behavior are evaluated on frozen test sets.	Expected/actual evaluation results, false-positive/false-negative analysis and failure cases.
Enterprise security/reliability	Tenant isolation, least privilege, secrets, backup/restore, concurrency, queues and recovery are tested.	Negative access tests, restore test, incident/recovery runbooks and security review.
Deep integrations	Veeva/RIM/QMS/LIMS/MES/ERP/document systems connect through controlled APIs and idempotent workflows.	Working integration demos with read/write boundaries and audit evidence.
Fast UX	Evidence review, impact assessment and approval require minimal clicks and make uncertainty obvious.	Task-time benchmarks and reviewer usability tests.
Measurable customer outcomes	Product reduces manual monitoring/research/impact/review effort without hiding risk.	Pilot baseline vs post-pilot metrics; no invented ROI claims.
Regulatory-domain validation	Practicing RA/CMC/Quality users verify semantics and workflow fit.	Documented SME review and corrected edge cases.
Pilot adoption	Real teams use the system on controlled scope and return for repeat workflows.	Pilot completion, recurring use, issue logs, referenceable feedback where permitted.
Operational support	Clear source onboarding, change management, incident response, model updates and release governance.	Support/runbook package and controlled release process.

13. Recommended Build Sequence: Moat Before Feature Bloat

Phase	Build focus	Exit condition
0	Baseline and truth boundary	Existing F01-F15, B-RI01-04, B-P01-05 and S-P controls mapped to actual code/UI/tests; “built/tested/live” labels are accurate.
1	Evidence core + failure honesty	Trusted sources, snapshots, exact diff, obligations, source-health states, evidence spans and audit lineage work end-to-end.
2	RIS depth	Deep evidence retrieval, cross-market research, evidence coverage, contradictions/unknowns and cited brief pass grounding tests.
3	Digital Twin + dependency graph	Versioned company objects and multi-hop impact/exclusion paths are demonstrable.
4	Decision Integrity	Decision Contract, dependency graph, evidence sufficiency, exact-revision human review and approval invalidation work.
5	Regulatory ChangeOps	Policy-as-code, unit/regression tests, sandbox, staleness propagation and drift detection operate on frozen fixtures.
6	Execution + closure assurance	Action orchestration, downstream handoff, closure comparator, persistent closure monitor and replay are working.
7	Enterprise integration + hardening	Veeva/RIM/QMS/API connectors, tenant security, concurrency guards, restore/reconstruction, observability and SLOs pass tests.
8	Pilot-grade proof	Controlled pilot sources, SME-reviewed results, measured outcomes, issue closure and production operating model are documented.

14. Golden Reviewer Journey for the Final Product

Step	What the reviewer should see	Proof
1	Trusted source monitored	Source registry, permission, jurisdiction, health and last successful fetch.
2	Exact change detected	Old/new source spans, immutable version IDs and material-change classification.
3	Requirement compiled	Atomic obligation tied to exact evidence.
4	RIS researches	Primary/approved evidence, history, cross-market context, coverage and open questions.
5	Digital Twin loaded	Exact company profile revision and dependency graph.
6	Blast radius calculated	Affected and excluded objects with paths and evidence.
7	Regression tests run	Relevant controls pass/fail/unknown; coverage visible.
8	Decision candidate created	Evidence sufficiency and Decision Contract are inspectable.
9	Named human reviews	Approve / Revise / Request Evidence / Reject exact revision.
10	Action propagated	Owner, due date, RIM/QMS/submission handoff and acknowledgement.
11	Closure verified	Before/after evidence compared; authorized reviewer verifies.
12	Upstream change occurs	Dependency engine marks affected RIS/decision/closure stale; irrelevant items stay untouched.
13	Historical replay	System reconstructs what was known, decided and done at the original time.

Step	What the reviewer should see	Proof
14	Counterfactual replay	System separately shows what would be concluded using current evidence without rewriting history.
15	Failure demo	Source outage/conflict/exhausted retrieval remains visible and never becomes NO_CHANGE or success.

15. Metrics and Acceptance Gates

Dimension	Example metric / gate	Why it matters
Source coverage	% configured priority sources healthy and checked within cadence.	Prevents invisible monitoring gaps.
Detection	Change detection precision/recall on frozen fixtures; detection latency.	Measures whether BEACON finds real changes without noise.
Obligation extraction	Supported obligation accuracy and unsupported-extraction rejection rate.	Protects downstream impact analysis.
RIS grounding	% material claims with correct source/version/span; evidence freshness and contradiction capture.	Measures research trustworthiness.
Impact	SME-agreed affected/excluded object precision on controlled cases.	Measures business relevance.
Decision integrity	0 approvals on stale revisions or missing mandatory evidence in tested paths.	Core governance gate.
Regression	% affected controls automatically selected and re-tested after change.	Core ChangeOps proof.
Closure	% closed actions with accepted before/after evidence; no “Done-only” closure.	Core assurance proof.
Replay	Historical decision reconstructed from original versions after restore.	Proves audit and resilience.
Tenant security	0 cross-tenant leakage in relational/object/vector/export negative tests.	Enterprise security gate.
Reliability	Bounded retries, visible dead-letter/HOLD paths, no fabricated success.	Failure honesty.
UX	Time/clicks to understand change, assess impact and complete review.	Adoption and operational speed.
Pilot outcome	Measured reduction in manual monitoring/research/review time with issue quality tracked.	Leadership requires real-world evidence, not feature count.

16. Claim Discipline

Claim type	Allowed wording	Do not claim until proven
Architecture differentiation	“The reviewed public competitor materials do not document this complete integrated change-to-decision-to-closure architecture as one product.”	“Only product in the world” or “world-first” without broader market/prior-art verification.
Build status	Use Built only for runnable artifacts; Tested only for executed expected/actual evidence; Live only after deployed endpoint is checked.	Production-ready, validated, regulator-approved or bug-free without evidence.
Accuracy	Report actual evaluation results with scope, dataset and failure modes.	100% accurate, hallucination-free or zero false positives unless independently demonstrated under defined conditions.
Compliance	Describe implemented controls and intended alignment.	Certified/validated compliance claims without the required formal process/evidence.
Customer outcomes	Use measured pilot results with context.	Invented ROI, time savings, adoption or customer logos.

17. Source Basis and Public Benchmark References

Existing product baseline: PRAMANEX BEACON + RIS Enterprise SaaS Master Blueprint (uploaded document, 28 pages). The baseline defines F01-F15, F03A, B-RI01-B-RI04, B-P01-B-P05, S-P01-S-P06, L01-L12, explicit runtime states, bounded specialist agents, human review and evidence-backed closure. The new capabilities in this document are proposed extensions and should be implemented/tested before being described as built.

Veeva RIM	https://www.veeva.com/products/veeva-rim/	Unified registrations, submissions, publishing, archive, correspondence/commitments and RIM connections.
IntuitionLabs Regulatory AI	https://intuitionlabs.ai/solutions/ai-analytics/regulatory-ai-tools	eCTD, RIM integration, CMC documentation, publishing, filing strategy and APQR/PQR automation.
Agilisium Context AI	https://www.agilisium.com/context-ai	Knowledge graphs, ontologies, RAG, multi-agent orchestration, HITL, compliance monitoring, audit logging and connectors.

Final architecture principle: BEACON should win by owning regulatory change-to-decision integrity and verifiable closure, while integrating with mature systems for authoring, RIM, QMS, publishing and execution. The product becomes stronger when it is narrower in category definition but deeper in evidence, dependency, testing, decision governance and closure assurance.
